## Front-End developer

---

### Summary

---

Throughout my career I've gained considerable experience in Drupal, CSS and JavaScript.

In the past 6 years I've got deep into theming of Drupal 7 and Drupal 8 sites. And by doing that learned a lot about site building. Therefore, for less complex sites I can take you through the entire website development process.

From the other side, being a company co-owner gave me a lot of valuable experience in the field of management, consultancy and client approach.

In the future I see myself as a Drupal Front-End developer, helping clients creating quality products that will serve their purpose and stand as respective presentation of their company.

---

### Work experience

---
